### LIVE PREVIEW

SniperSheet | Smart Hub

AR | EN

Selection: B2:D15 (42 cells detected)

"Highlight sales below 5000 in red, top 10 in green"

Analyze >>

**Success - Conditional formatting applied**

42 cells updated | Below 5,000 = red | Top 10 = green

# What Is SniperSheet?

Purpose, Vision & How It Works

SniperSheet is a professional Excel Add-in that embeds a full AI engine inside Microsoft Excel. Select cells, describe what you want in plain language, and the AI builds formulas, applies formatting, or analyzes data instantly — no expertise required.

"Excel was already powerful. SniperSheet makes it human."

## How It Works - 3 Simple Steps

1

### SELECT

Click and drag in Excel to select any range. SniperSheet reads your selection address, size, and data types...

2

### DESCRIBE

Type your goal in plain Arabic or English. No formula syntax. No training. Just say what you want done.

3

### DONE

Click Analyze. The AI responds in 1-3 seconds and applies the result — formula or formatting — directly to your...

## Real Command Examples

| LG | YOUR COMMAND                                 | RESULT / ACTION                              |
|----|----------------------------------------------|----------------------------------------------|
| EN | "Calculate average salary per department"    | =AVERAGEIF(B:B,E2,C:C) applied to range      |
| EN | "Highlight all values below 50 in orange"    | Conditional rule: LessThan 50 -> orange fill |
| EN | "Find employee name from ID in lookup table" | =VLOOKUP(A2,Sheet2!A:B,2,0) inserted         |
| AR | "Ihtasib Ijmali Al-Mabee3at Li-Kul Mintaqa"  | =SUMIF(A:A,D2,B:B) applied automatically     |
| AR | "Lawn Al-Khana Ya'I Aqal Min 100 Bil-Ahmar"  | Conditional rule: LessThan 100 -> red fill   |

## Why Anyone Can Use It From Day One

- No formula memorization required — just describe your goal in plain words
- Bilingual: understands commands in Arabic and English simultaneously
- Mouse selection is your primary input — Excel stays familiar
- Every action is explained in plain language after it is applied
- Errors are shown with clear guidance — not cryptic formula errors

## Core Features

Everything SniperSheet can do for you

AI

### Smart Hub

Central AI command panel. Select cells, type your goal, click Analyze. Zero formula knowledge needed.

FX

### Formula Engine

Converts plain language into precise Excel formulas — SUM, IF, VLOOKUP, INDEX/MATCH, PMT, and 50+ more.

FMT

### Smart Formatting

Apply conditional colors, font styles, fills, number formats, and table styling from a single sentence.

AR

### Bilingual AR | EN

Full Arabic RTL interface plus English. Commands understood in both languages simultaneously.

M1

### Mouse-First Workflow

Select cells with your mouse — that IS your input. No cell references to type, no syntax to remember.

1s

### 1 to 3 Second Speed

Powered by Groq ultra-fast AI inference. Typical response: under 2 seconds from click to applied result.

RDR

### Word Radar Engine

Local keyword detection pre-classifies intent before calling AI. Faster for common tasks, works offline.

SEC

### Secure API

CORS-locked, rate-limited, token-authenticated. Your data is never stored after the request completes.

## Supported Formula Categories

| CATEGORY           | FORMULAS INCLUDED                         |
|--------------------|-------------------------------------------|
| Math & Aggregation | SUM AVERAGE MAX MIN COUNT SUBTOTAL        |
| Logical            | IF IFS AND OR NOT IFERROR SWITCH          |
| Lookup & Reference | VLOOKUP HLOOKUP INDEX/MATCH XLOOKUP       |
| Text Manipulation  | CONCAT LEFT RIGHT MID TRIM PROPER TEXT    |
| Date & Time        | TODAY NOW DATEDIF NETWORKDAYS YEAR MONTH  |
| Statistical        | COUNTIF SUMIF AVERAGEIF RANK PERCENTILE   |
| Financial          | PMT NPV IRR FV PV RATE                    |
| Dynamic Array      | FILTER SORT UNIQUE SEQUENCE XLOOKUP spill |

# Who Is SniperSheet For?

Built for everyone — no expertise required

## Students

Complete Excel assignments and data analysis without any formula knowledge.

## Accountants

Automate payroll, tax, and reconciliation calculations instantly.

## Enterprises

Standardize Excel across teams with no training overhead required.

## Business Owners

Build financial reports and dashboards without hiring consultants.

## HR Professionals

Analyze attendance, performance, and payroll data with simple commands.

## Data Analysts

Generate complex formulas and conditional reports at conversational speed.

## Traditional Excel vs. Excel + SniperSheet

| TRADITIONAL EXCEL                   | EXCEL + SNIPERSHSET                       |
|-------------------------------------|-------------------------------------------|
| x Must know formula syntax          | ✓ Type in plain Arabic or English         |
| x Hours to build complex sheets     | ✓ Done in minutes — often seconds         |
| x English-only tools available      | ✓ Full Arabic RTL + English bilingual     |
| x Error-prone manual entry          | ✓ AI validates and applies correctly      |
| x Requires training and tutorials   | ✓ Works on first use, zero learning curve |
| x Formatting needs many menu clicks | ✓ One sentence delivers instant result    |
| x Static formulas typed by hand     | ✓ Smart range-aware formula generation    |
| x No context about your data        | ✓ AI reads selection and adapts to it     |

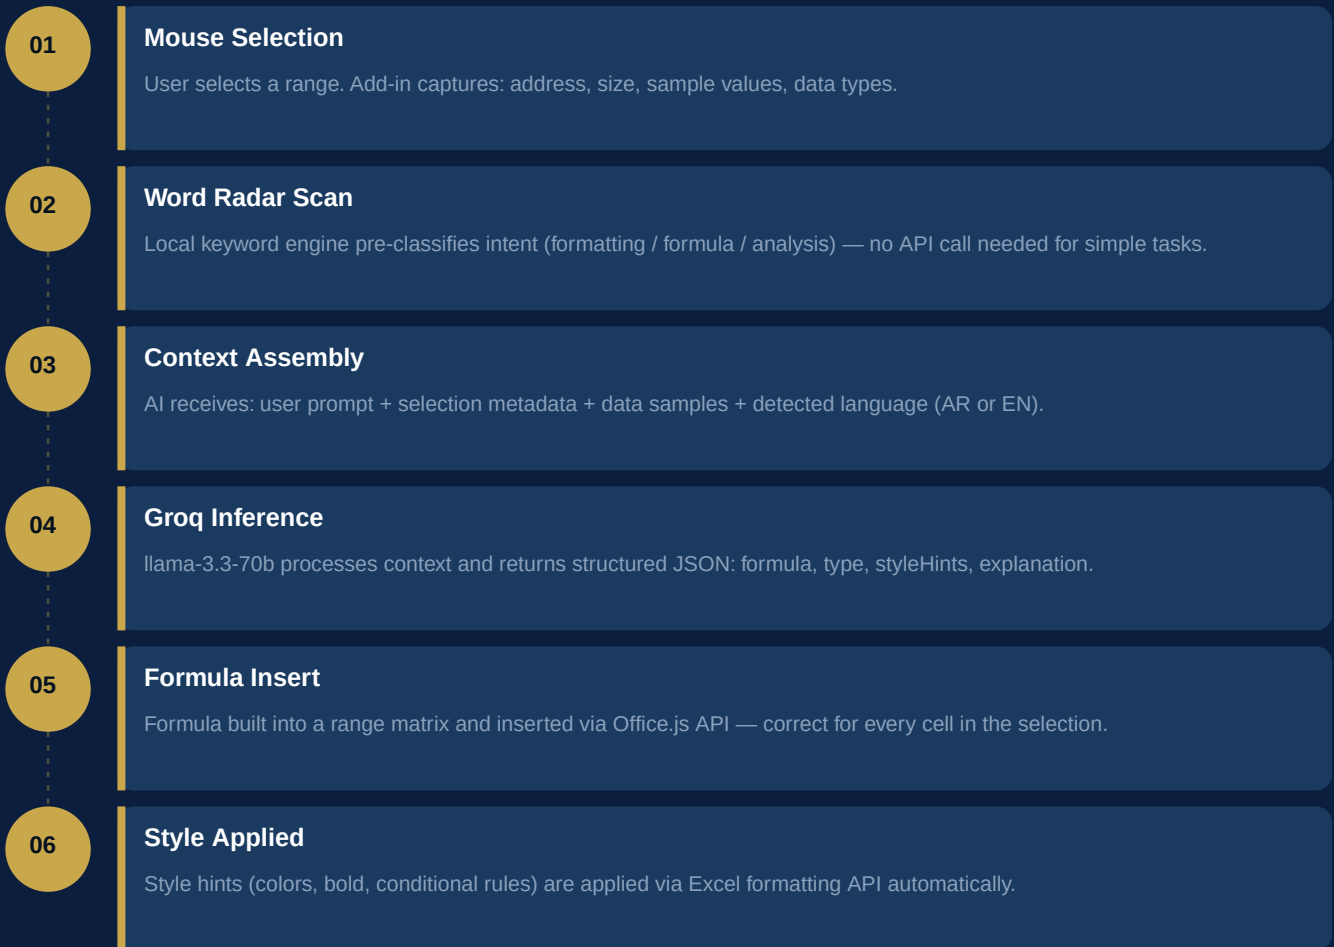

## Technical Highlights

|               |                                                              |
|---------------|--------------------------------------------------------------|
| AI Engine     | Groq API - llama-3.3-70b-versatile (ultra-fast inference)    |
| Response Time | Average 1 to 3 seconds from click to applied result in Excel |
| Platform      | Microsoft Excel Desktop + Excel Online (Office Add-in API)   |
| Interface     | 400px Task Pane - React + TypeScript - Tailwind CSS          |
| Backend       | Node.js - Express - Secure cloud hosting                     |
| Languages     | Arabic (RTL, full UI + AI) - English (full UI + AI)          |
| Security      | CORS-locked - Rate-limited - App token - HTTPS only          |
| Offline Mode  | Basic formatting detection via local Word Radar engine       |

# AI Engine - Deep Dive

How SniperSheet intelligence works under the hood

## AI Request Pipeline

## Structured AI Response (JSON)

```
{  "formula":      "=AVERAGEIF(B:B, E2, C:C)",  "formulaType":  "analytical",  "explanation":    "Average salary per department",  "styleHints": {    "fontBold": true, "fillColor": "background"  }}
```

## Conditional Formatting Intelligence

SniperSheet translates natural-language conditions into proper Excel conditional formatting rules that update dynamically as your data changes:

| YOUR COMMAND                       | EXCEL RULE CREATED                |
|------------------------------------|-----------------------------------|
| "Highlight values below 50"        | -> LessThan 50 -> orange fill     |
| "Color top 10 percent in green"    | -> TopPercent 10 -> green fill    |
| "Mark negative numbers red"        | -> LessThan 0 -> red fill + bold  |
| "Values below 100 in red (Arabic)" | -> LessThan 100 -> red fill       |
| "Above average highlighted blue"   | -> AboveAverage rule -> blue fill |

# Security, Privacy & Getting Started

## Enterprise-Grade Security

### CORS Protection

API locked to the official SniperSheet domain only. Requests from any other origin are rejected.

### Rate Limiting

200 req / 15 min globally. 60 req / 15 min for AI endpoints. Prevents abuse and ensures fair usage.

### App Token Auth

Every AI request requires a proprietary token. Direct API access without the Add-in is rejected.

### Data Privacy

Data is sent only when you click Analyze. Nothing is stored on the server after processing completes.

### HTTPS Encryption

All communication is encrypted end-to-end via TLS. No plain-text transmission at any point.

### Copyright Protection

Every API response includes copyright attribution headers — SniperSheet is a proprietary product.

## Get Started in 60 Seconds

- 1 Open Microsoft Excel (Desktop or Excel Online)
- 2 Go to Insert -> Add-ins -> Upload My Add-in
- 3 Upload the SniperSheet manifest XML file
- 4 The SniperSheet task pane appears on the right side
- 5 Select any cells, type your goal, click Analyze
- 6 Excel does the work — formula applied in seconds

## Ready to Transform Your Excel Experience?

SniperSheet is the fastest way to turn any Excel task into a one-sentence command. No formulas. No training. No limits.
